

CareerBuddies Founder Ledger

Branding, Founder Profiles and UI Verification Report

Branch `claude/compassionate-bardeen-9zxrjv` · base commit `e6b4ae7` · 2026-10-09

1. What changed

- **Logo:** replaced with the supplied CareerBuddies logo (whitespace trimmed, no redraw). Updated `client/public/brand/careerbuddies-logo.png` (the default shown everywhere) and `assets/brand/careerbuddies-logo.png`. Displayed on a clean white sidebar header and large on the login page.
- **Founder photographs:** your three photos were cropped to square headshots only (no editing/generation) and mapped exactly: Nishant Sharma → `assets/founders/nishant-sharma.jpg`, Deepak Sah → `deepak-sah.jpg`, Divyanshu Gautam → `divyanshu-gautam.jpg`. Imported through the existing workflow (`importBrandAssets`) and stored in the branding volume.
- **Order everywhere:** Nishant (Founder), Deepak (Co-founder), Divyanshu (Co-founder) — verified on Founders, Dashboard, Settings and the transaction form.
- **UI aligned to the reference:** white sidebar with light-blue active item; login split screen (logo + blue panel “Track. Manage. Settle. Together.”, “Welcome Back”); wide founder cards with large photo, role badge and contribution / share / net figures; Transactions All/Pending/Approved/Rejected tabs.

2. Verification (executed)

Check	Result
-------	--------

Client typecheck + Vite build	clean
Client tests	92 / 92 passed
Server tests (unchanged code, last run)	403 / 403 passed
Real-browser suite (Playwright/Chromium) against a freshly rebuilt stack with the new frontend	156 / 156 passed — includes login/sign-out, founder order, photo upload, settings propagation, create/approve transactions, Option C reimbursement, Record payment dialog + approve (confirm) + reverse , recurring, reports, audit, responsive layouts
Main stack rebuilt without deleting volumes; health <code>ok</code> , DB connected; assets imported	verified in sandbox

Honest note: an earlier run of the browser suite used an old frontend image; it was rebuilt and re-run, and the 156/156 figure is from the rebuilt image.

3. Not verified / deviations from the reference

- **Your Windows PC:** all running and screenshots were done in the cloud sandbox, not on your PC. After `git pull` and `docker compose --env-file .env -f docker/docker-compose.yml up --build -d`, run once: `docker compose --env-file .env -f docker/docker-compose.yml exec server node dist/scripts/importBrandAssets.js` after copying the three photos into `assets\founders\` (the photos are deliberately **not committed** to Git). The logo is committed. Or upload them in Settings → Founders.
- **Add Transaction** remains a full page, not the modal shown in the reference; the Settlements “Mark Settled” button is labelled “Record payment” (it records, then an approver confirms, matching the audited flow); no “Forgot password” or “Remember me” (no backend for them); the reference dashboard’s three-KPI row is shown as four required KPIs plus extra figures.
- Pixel-level parity with the reference was not claimed; colours and layout were aligned by eye.
- The Record payment dialog screenshot could not be captured on the final data (no open suggestion); its behaviour is covered by the browser suite.

4. Git

Commit hash reported in the chat message. No `.env`, secrets, or founder photographs are in the diff.
