Add Transaction Modal — UI Verification Report

Branch `claude/compassionate-bardeen-9zxrjv` · base `728daf8` · 2026-10-09

1. What changed

- Add Transaction is now a centered dialog over the Transactions page (dimmed overlay, list stays rendered behind).
`/transactions/new` still works as a link, from the sidebar and from the dashboard “Settle” prefill — it opens the Transactions page with the dialog open; closing returns to `/transactions`.
- New `components/Modal.tsx` (title, close button, focus moved in and trapped, Escape/overlay click request close, body scroll locked, focus restored) and `TransactionModal.tsx` (discard confirmation).
- The **existing** `TransactionForm` is reused (same fields, validation, split preview, Option C reimbursement picker, receipt rules, idempotency key, API calls). Fields are reordered in the dialog to the reference: Date, Description, Category, Amount, Paid by, Receipt, Notes; type chips, payment method, counterparty, expense picker and split appear when the type needs them.
- Footer: Cancel, Save as draft, **Save Transaction** (submits for approval, as before). Rapid repeated submits are blocked by an in-flight guard plus the server-side `clientRequestId`.
- Success closes the dialog, returns to the list with “Transaction submitted for approval.” and reloads it; the pending-approval badge and dashboard reload on navigation. Failure keeps the dialog open with every value and shows the server message.
- Unsaved input: Escape, close button, overlay click and Cancel ask “Discard this transaction?”; browser tab close and sidebar links are guarded too.
- Mobile: bottom sheet limited to the viewport, scrolling body, pinned footer (Save on its own row).
- **Editing** an existing transaction is unchanged (full page at `/transactions/:id/edit`). No server, database or financial-rule code was changed.

Add Transaction [Close]

What kind of transaction is this?

Business Expense Founder Contribution Founder Loan Reimbursement

Settlement Refund Other

Date: 10/09/2026 [Calendar icon]

Description: e.g. Annual cloud hosting
Add a short description

Category: Select a category [Dropdown]

Amount (INR): 0.00
Enter a valid amount greater than 0, e.g. 1500 or 1500.50

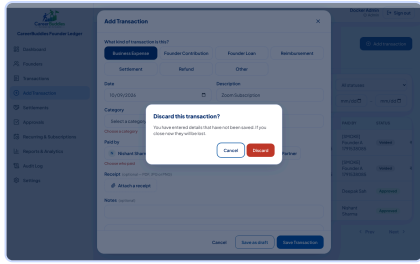

Paid by: [N] Nishant Sharma [D] Deepak Sah [D] Divyanshu Gautam [Z] Zed Partner
Choose who paid

Receipt (optional — PDF, JPG or PNG)
Attach a receipt

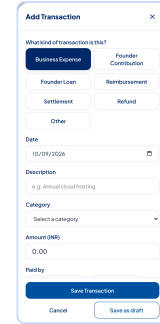

Notes (optional)

Cancel Save as draft Save Transaction

Dialog over the Transactions list with validation messages

Discard prompt when closing with entered data

Phone layout (390px)

2. Test results (executed)

Check	Result
Client typecheck + Vite build	clean
Client tests	101 / 101 passed (92 before; 9 new modal tests)
New modal tests	open over list; close/Cancel/Escape; focus trap; discard prompt keep/discard; validation without API call; save closes + notice + list reload; API 500 keeps values; triple submit = 1 POST with one idempotency key; mobile layout classes
Existing transaction-form tests	kept and re-pointed at the dialog (same assertions: types, validation, split preview, minor units, Option C picker/over-reimbursement error, settlement prefill, server field errors)
Real-browser suite (Playwright/Chromium, freshly rebuilt stack)	163 / 163 passed (156 earlier + 7 modal checks incl. 390×700 fit); includes create/approve, Option C reimbursement and void guard, settlements, reports
Server tests	not re-run: no server code changed (last run 403 / 403)
Main stack rebuilt without deleting volumes	health ok, DB connected; 4 existing transactions and founder balances identical before/after (Nishant ₹5,000 contributed; Deepak paid ₹3,000)

3. Known limitations

- Verified in the cloud sandbox, not on your Windows PC. After `git pull` run `docker compose --env-file .env -f docker/docker-compose.yml up --build -d` (no volume deletion).
- Pixel parity with the reference was not measured. The reference shows a Paid-by dropdown; the app keeps founder chips (shows photo-free initials, keyboard-accessible radio group). Receipt is an “Attach a receipt” button, not a drag-and-drop area. Type chips, Save as draft and conditional fields are extra to the reference because the model needs them.
- The modal is a route (`/transactions/new`): the list reloads when it opens/closes, and the browser Back button closes it.
- Editing remains a full page (not requested to change).
- Success feedback is a banner on the list, not a toast.
